Historical Tourist Places

CONTEXT

- 1.Objectives
- 2.Input and Output
- 3. Details of Modules
- 4. Usecase Diagrams
- 5.Tools/Platforms/Languages
- 6.Coding(PHP and My Sql)
- 7. Database Tables
- 8. Output Screens
- 9.Test Cases
- 10.Limitations of the Project
- 11. Scope of Future Reference

Bibilography

1.OBJECTIVES

Historical tourist placesmanagement system is a web application, used to showall historical places in the world. Now a days all travel agencies are doing their business through online. Travel agencies are displaying their products through online. Customers can search for various tourist places and their prices through online.

In our project customer can book for selected historical place package.

2.INPUT AND OUTPUT

Input Forms in our project:

1) Booking for historical tourist place package

Output Pages in our project:

- 1) Display All historical places Page
- 2) About us page
- 3) Contact us page

3.DETAILS OF MODULES

Our Project having Three Modules:

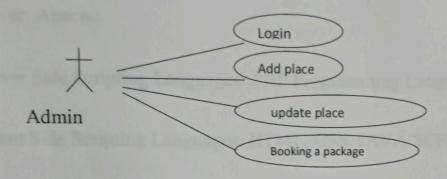

- 1) Admin Module
- 2) Users Module

In Admin Module, admin login form having admin username and password. If these values are matched with backend database values, then only admin gets authentication to the server. After authentication, admin control panel will be displayed.

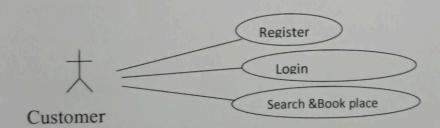

In Users Module, user can register and login to his account. If these values are matched with backend database values, then only admin gets authentication to the server. After authentication, user control panel will be displayed.

4.USECASE DIAGRAMS

1) Usecase diagram for Admin:

2) Usecase diagram for User:

5.TOOLS/PLATFORMS, LANGUAGES

Operating System: Windows 7

Server: Apache

Server Side Scripting Languages: PHP Programming Language

Client Side Scripting Languages: HTML, CSS, JAVA SCRIPT

About PHP and MySql

6.CODING

```
1) Index.php:
   <html>
   <frameset rows="20%, 80%">
   <frame name="f1" src="menu.php">
   <frame name=f2>
   </frameset>
   </html>
2) Home.php:
    <html>
    <body bgcolor=thickblue>

9.TEST CASES

- 1) Test Case 1: Admin Login- check username and password values with the values that are already stored in the server. If these values are matched with the values stored in the server, then only the admin gets authentication.- It is success.
 - 2) Test Case 2: Customer Login: check username and password values with the values that are already stored in the server. If these values are matched with the values stored in the server, then only the customer gets authentication.- It is success.
 - 3) Test Case 3: Book tourist place: first search for touristplace. After that book tourist place package. Check all values are properly storing in booking table. it is success.
 - 4) Test Case 4: View Bookings: login to admin panel. After that check in view bookings page. Already booked tourist places are available in that page.- it is success.

10.LIMITATIONS OF PROJECT

In this project we developed all the functionalities of tourism organizations. Here limitations are, this project not contains all the roles of tourism management employees. Here we used only admin to manage and maintain applications. In real world applications, multiple branches of customers exist. Here in this project we used only one branch customers for single organization.

11.SCOPE OF FUTURE REFERENCE

This project is very much used in future for tourism management related applications. Here, we developed this application with fully secured server side scripting language PHP. All the functionalities of tourism management application are included in this project.
